Section	Summary of change
---------	-------------------

All	Incorporated waivers 25-001, 002, 005, 007, 008, 009 & 010.
-----	---

PURPOSE & SCOPE

Along with UGLRL issued TOC waivers, this document lists Road-Rail Vehicles (RRV), Trolleys, Quadricycles and Trailers that are certified for operation on the Country Regional Network (CRN).

Prior to commencing work with the CRN, all RRVs, trolleys, quadricycles and trailers must:

- Be listed in this section of the CRN TOC manual or be covered by a CRN TOC waiver. A TfNSW or ARTC issued TOC listing or waiver is not acceptable for this purpose.
- Hold a current third-party annual recertification as per CRN RS 016.
- Display a physical CRN Rail Registration sticker, with old or expired CRN stickers removed.
- Have a signed copy of a work contract.
- Have undergone a pre-work inspection recorded in an inspection sheet, signed by the operator and endorsed by the worksite supervisor. Templates can be provided on request.
- Be under direct control of the vehicle operator listed herein.

The above requirements will be subject to a worksite spot audit and if a piece of plant is found to be non-compliant the plant will not be permitted to continue work on the CRN. Plant with annual recertifications that are expired for more than three months may be removed from this manual and may require enhanced inspection to gain re-listing.

For trolleys, CRN does not impose strict limits on maximum gross mass, however owner/operators are responsible for manual handling risks, including number of persons needed to safely push or pull a trolley, particularly for 'High GVM' trolleys (>500kg) and movement on a grade.

OPERATING CONDITION NOTES

NOTE:	All Track Maintenance Vehicles and Road/Rail vehicles must operate in accordance with network rule CNWT 316 ('Track Vehicles') and under MANUAL BLOCK WORKING CONDITIONS as per network rule CNSY 512, unless exempted by NOTE T3, which authorises a vehicle to operate under the control of track signalling.
T1	Vehicle can be removed from rail using portable take off.
T2	Vehicle can be coupled into a train consist. Refer to specified maximum trailing load.
T3	Vehicle permitted to operate under the control of track signalling and not under block working conditions.
T4	This note is not relevant to the CRN
T5	This note is not relevant to the CRN
T6	Maximum speed of vehicle when coupled in a train consist 80 km/h
T7	Maximum speed of vehicle when coupled in a train consist 50 km/h
T8	This note is not relevant to the CRN
T9	Vehicle can be removed from the track by hand.
T10	Maximum speed of vehicles when coupled in a train consist 60 km/h
T11	This note is not relevant to the CRN
T12	This vehicle is restricted to a maximum speed of 20 km/h in the forward direction, and 5 km/h in the reverse direction when traversing track fitted with check rails or guard rails such as at points, crossings, bridges and level crossings.
T13	This note is not relevant to the CRN.

OPERATING CONDITION NOTES

T14	This vehicle is restricted to operation within a possession area only . All movements shall be controlled by the possession officer . No other vehicles will be permitted to pass this vehicle on any adjacent lines until the possession officer has been advised that the vehicle has come to a stand and is clear of the adjacent line. The maximum speed permitted within a possession area is 15 km/h.
T15	These vehicles comply with the CRN Narrow Square' Rolling Stock outline and their operation may be restricted on certain track corridors: The Operator must gain authority from the Track Manager where it is proposed to operate this type of vehicle on the CRN.
T16	This vehicle is fitted with an automatic coupler and air brake coupling hoses on the rear end and air compressor. This vehicle can be used to shunt rail vehicles.
T17	This vehicle can be marshalled within a train consist provided it is positioned in the train consistent with its draw capacity and the train is able to operate under the control of track signalling. If this vehicle is marshalled within the last three (3) vehicles on the train, the train must operate under block working conditions and the normal brake retention tests applicable to the last three (3) vehicles, must also be carried out on this vehicle. The owner/operator of the vehicle must ensure that the vehicle is set up correctly for "in-train" operation in accordance with manufacturer's recommended operating procedures. Such procedures may include, but are not limited to, the following requirements: • All gearboxes have been disengaged. • All drive axle lock outs have been engaged. • All driver's brake valve levers, (in all cabs) have been moved to the "neutral" position. • The vehicle to be accompanied by an authorised representative.
T18	Vehicles identified with this note shall operate in travel mode with a driver safety system incorporating two independent safety features. The two independent safety features shall consist of either: • a vigilance system (task linked preferred) plus a suitable authorised person. An authorised person in this case, is a second person, accompanying the vehicle driver/operator, with sufficient knowledge of the vehicle to take control and bring the vehicle to a stand in case of an emergency. OR. • a task linked vigilance system plus a driver enabling device ('deadman'). The latter is a mandatory requirement for driver only operation.
T19	This note is not relevant to the CRN
T20	This vehicle must operate as the leading vehicle when travelling in a convoy with other infrastructure maintenance vehicles. This limitation does not apply when in work mode.
T21	This vehicle is not fitted with height restrictors to limit the travel of its moveable elements. This vehicle therefore can infringe the minimum safe approach distances when working under overhead wiring and is only permitted to work on non-electrified track or on track where an electrical permit to work has been issued (Overhead wiring is isolated)
T22	Trolleys do not require lights during daylight operation, however during conditions of poor visibility, night operations and within tunnels, suitable front and rear lights must be fitted.
T23	This note is not relevant to the CRN
T24	This vehicle is fitted with an elevated work platform (EWP) that shall not be utilised when the vehicle is on rail. Travel of the vehicle on rail, with the EWP stowed in the travel position, is permitted. For road/rail vehicles, the EWP may be used if the vehicle is in road mode not utilising the rail wheels
T25	This vehicle is fitted with an elevated work platform (EWP) that is permitted to be utilised when on rail. The EWP is not permitted to be utilised while the vehicle is in motion (vehicle shall be

OPERATING CONDITION NOTES

	stationary for EWP use). Travel of the vehicle on rail, with the EWP stowed in the travel position, is permitted.
T26	Safe load radius of these machines (including side/end loading) to be managed by operator.
T27	Operator responsible for monitoring devices which limit max load on rail guidance equipment.
T28	Movements over turnouts and crossings should be conducted with enhanced personal vigilance and at no more than 5km/h.

REG. NUMBER	PLANT NUMBER	DESCRIPTION OF VEHICLE	MAX SPEED km/h	LOADED MASS tonne	LENGTH metres	NOTES (See pg 1)	EXPIRY
XS02CG	RRV5704	Isuzu FTS 4x4 HiRail	60	13.9	8.5	T12 And see below.	20/12/2024

Notes for RRV5704:

- Rear rubber tyres on track exceed that permitted by Rolling Stock Standard CRN RS-006 – Outer width 2350mm, Inner width 1250mm. Vehicle is restricted to non-train stop areas and speed restricted to 20 km/h in the forward and 5 km/h in the reverse direction when traversing track fitted with check rails or guard rails, such as at points, crossings, bridges and level crossings. Care must be taken in areas where there is high ballast shoulders, sleepers laid-out, rail lubricators, etc.
- Not approved to operate signals – must work under authority or block working.
